Project Setup

- Django + DRF
- Postgres
- SimpleJwt

Database

- Define models:

Please see

Database Schema Document

User Data

Client-facing Api logic

non-Client facing Api logic

Card Data

CSV Upload

- implement CSV upload fnc.
- Upload record for **CSV** files

Card ingestion

- Parse Available credit cards into db

Internal Services

these are not actual endpoints

CSV Parsing

- Create idempotent transactions

Recommendation logic

- Rank cards based on user's spending
  - scoring formula
  - validation checks
  - scoring tie-break logic
  - confidence logic
  - refunds/handling

Spending Logic

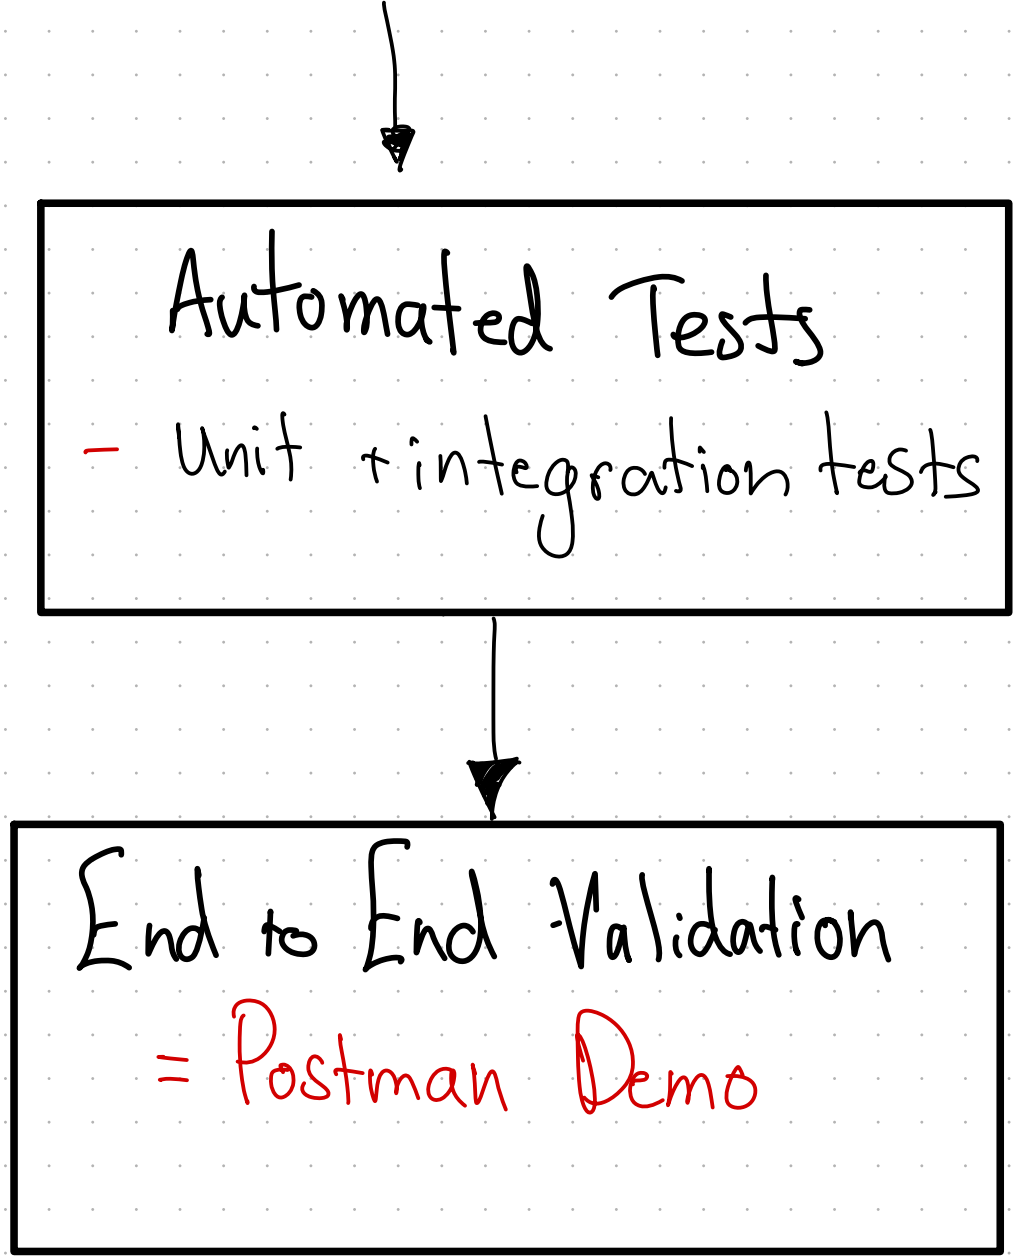
= category totals

Merchant Category Codes

Api Endpoints

- Authentication/Upload/Summary/Recommendations

now you create the actual endpoints



Automated Tests
- Unit + integration tests
End to End Validation
= Postman Demo
